PREFACE

The purpose of the *Energy Fact Book* is to provide key information on energy markets in Canada in a format that is easy to consult. Resources including a summary of units and conversion factors, abbreviations, and data sources used throughout this publication are available in the annexes.

All data is subject to revisions by statistical sources. In some instances, more than one source may be available and discrepancies in numbers may occur because of conceptual or methodological differences. In addition, some numbers may not add up precisely due to rounding.

This publication was assembled by the Energy and Economic Analysis Division of the Energy Policy and International Affairs Branch with the help of subject experts from across Natural Resources Canada (NRCan).

For questions or comments, contact NRCan at nrcan.energyfacts-faitsenergetiques.rncan@canada.ca.

In this publication, energy industries are generally considered to include oil and gas extraction; coal mining; uranium mining; electric power generation, transmission and distribution; pipeline transportation; natural gas distribution; biofuels production; petroleum refineries; and support activities for oil and gas extraction. The petroleum sector is a subset of these industries, and in this publication consists of oil and gas extraction and support activities, pipeline transportation and distribution of oil and gas, and petroleum refineries.

Clean energy industries such as renewable and nuclear electricity generation, biofuels production and carbon capture and storage facilities are contained within the definition of energy industries. Some energy-related industries (e.g. petroleum product wholesaler-distributors and coal product manufacturing) are excluded because of a lack of data.

INTRODUCTION

From an energy perspective, Canada is very fortunate. We have a large land mass, small population and one of the largest and most diverse supplies of energy in the world. Our rivers discharge close to 7% of the world’s renewable water – a tremendous source of hydroelectric power. We have the fourth-largest proven oil reserves and third-largest reserves of uranium; our energy resources are a source of strength that continues to shape our economy and society.

Canada is at the forefront of innovative technologies for how we produce and use energy. For example, low- or non-emitting forms of energy are growing in significance as part of our evolving electricity mix. In fact, wind and solar photovoltaic (PV) energy are the fastest-growing sources of electricity generation in Canada. In addition, technological advancements, such as co-generation, have resulted in an increase in energy-efficient practices and a reduction in greenhouse gas (GHG) emissions in areas such as the oil sands. Ongoing developments in areas such as grid-scale electricity storage, carbon capture and storage, hydrogen, and electric and alternative fuel vehicles have the potential to further transform the energy system.

For over ten years, the Energy Fact Book has provided a solid foundation for Canadians to understand and discuss important developments across the energy sector. A significant milestone in Canadian energy information was recently achieved with the launch of the Canadian Center for Energy Information (CCEI). Housed at Statistics Canada, the CCEI brings together Canada’s existing energy information in one place, facilitating access to products like the Energy Fact Book.
Section 6: Oil, natural gas and coal

- Crude oil
- Natural gas
- Hydrocarbon gas liquids (HGLs)
- Refined petroleum products (RPPs)
- Coal
- GHG Emissions from petroleum
PETROLEUM AND THE ECONOMY

NOMINAL GDP CONTRIBUTION FOR CANADA, 2020

NOMINAL GDP (% OF CURRENT DOLLARS)

- **5.7%** or $118 billion

CANADIAN GDP

- PETROLEUM DIRECT 3.9% ($81 BILLION)
- PETROLEUM INDIRECT 1.8% ($37 BILLION)

EMPLOYMENT, 2020

- **DIRECT: 178,500 JOBS**
  - OIL AND GAS EXTRACTION: 68,000
  - SUPPORT ACTIVITIES: 59,000
  - EXPLORATION: 8,000
  - NATURAL GAS TRANSMISSION AND DISTRIBUTION: 19,000
  - CRUDE OIL PIPELINES: 5,600
  - OTHER: 19,000
- **INDIRECT: 415,000 JOBS**
- **TOTAL: 593,500 JOBS**

- Approximately 10,400 Indigenous people are employed in the oil and gas sector.

- Capital Expenditures (2020): $38 billion
- Canada’s oil and gas sector represents about 26% of the country’s GHG emissions.
- Exports (2020): $86 billion (16% of total exports)

4TH Largest oil producer globally
5TH Largest gas producer globally
While Canada’s petroleum sector directly employed 178K people in 2020, the sector’s use of inputs from other industries created an additional 415K indirect jobs in the supply chain.

Alberta employed the majority (54%) of the supply chain workers followed by BC (15%). Ontario (13%) and Quebec (6%) also accounted for sizeable shares of supply chain jobs.

* Includes crude oil, NGLs, additives and other hydrocarbons (including the receipts of additives).
World proved reserves

1,728 billion barrels
(at the end of 2020)

97% of Canada’s proven oil reserves are located in the oil sands.

Venezuela 18%
Saudi Arabia* 15%
Iran 12%
Iraq 10%
Other 8%
Canada 37%

Proved reserves are those reserves expected to be recoverable with a high degree of certainty.

*Saudi Arabia and Kuwait reserves include the Saudi-Kuwaiti “neutral zone,” with total proved reserves of 5 billion barrels.
**CANADIAN RESOURCES**

**REMAINING ESTABLISHED RESERVES***
(billion barrels, as of December 2020)

- **Canada total**: 166.7
  - Conventional**: 5.7
  - Oil sands***: 161
    - mining 32
    - in situ 129

*Reserves known to exist and recoverable under current technological and economic conditions.

**Reserves also include proved reserves of pentanes plus (a crude-oil equivalent that is associated with oil production).

***With improved technology, it is estimated that 315 billion barrels are ultimately recoverable from the oil sands.
CANADIAN PRODUCTION

Oil sands production has exceeded conventional production since 2010. In 2020, oil sands production was 2.8 MMb/d compared with 1.6 MMb/d of other oil production.

PRODUCTION BY TYPE

PRODUCTION BY PROVINCE, 2020

*Other: Nova Scotia, Ontario and the Northwest Territories include crude oil, condensates and pentanes plus.
CANADIAN SUPPLY AND DEMAND* (2020)

Canadian production: 4.5 MMb/d
Exports: 3.6 MMb/d
Imports: 0.8 MMb/d

Exports: 1.6 MMb/d

OIL SANDS
An estimated **$332 billion** of capital investment to date, including **$7.4 billion** in 2020

BITUMEN UPGRADING
- Crude bitumen from oil sands may be transported to upgraders for processing to make it lighter – “synthetic crude oil.”
- In 2020, **47%** of the raw bitumen produced was sent for upgrading in Alberta.
- Major companies with upgrading capacity include Syncrude, Suncor, Shell, Canadian Natural Resources, Husky and Nexen-CNOOC.
- The total upgrading capacity in Canada is **1.33 MMb/d**
- Bitumen may also be blended with diluent (e.g. condensates) and sold directly to refineries capable of processing heavier oils.
MINING METHOD

Process: Companies use trucks and shovels to scoop oil sands from the ground. The oil sands are then transported to extraction plants where bitumen is separated from the sand by using steam. Tailings are then pumped into settling basins.

In 2020, seven projects in Alberta produced 1,611 Mb/d: Syncrude Mining Project (354 Mb/d), Suncor Base Mine (290 Mb/d), CNRL Horizon Mine (234 Mb/d), Athabasca Oil Sands Project – Muskeg River (159 Mb/d), Jackpine Mine (130 Mb/d), Imperial's Kearl Mine (280 Mb/d) and Fort Hills (164 Mb/d).
IN SITU METHOD

Process: Companies drill vertical and/or horizontal wells to inject steam to facilitate the flow of oil.

More than 20 projects in Alberta – The largest projects in 2020 were Firebag and MacKay River (Suncor) at 217 Mb/d, Christina Lake (Cenovus) at 159 Mb/d, Foster Creek (Cenovus) at 159 Mb/d and Cold Lake (Imperial Oil) at 142 Mb/d.
In 2020, imports of crude oil into Canada came from a range of countries including:

- **78%** U.S.
- **13%** Saudi Arabia
- **4%** Nigeria
- **3%** Norway
- **1%** Colombia

Over recent years, the U.S. has become Canada’s primary supplier of imported crude oil.

**CANADIAN CRUDE OIL IMPORTS, BY ORIGIN**

- **United States**
- **Saudi Arabia**
- **Algeria**
- **Norway**
- **Other**

In 2020, Canada was the **largest foreign supplier of crude oil** to the U.S., accounting for **61%** of total U.S. crude oil imports and **23%** of U.S. refinery crude oil intake, exported **3.5MMb/d** to the U.S., representing **97%** of all Canadian crude oil exports.
PRICES

WEST TEXAS INTERMEDIATE (WTI)
- Reference price for light crude oil delivered at Cushing, Oklahoma (a major pipeline hub)
- Used as the benchmark price for North American crudes and underlies oil futures contracts on the NYMEX

WESTERN CANADIAN SELECT (WCS)
- WCS is the main benchmark price for Canadian heavy crude, specifies delivery at Hardisty, Alberta and is representative of the price of oil from the oil sands.

WTI-WCS DIFFERENTIAL
- WCS is typically sold at a discount to WTI due to differences in quality and transportation costs. Heavy crude is more difficult to process and requires specialized equipment at refineries.
- The WCS-WTI differential has historically averaged between US$10-$15 per barrel. However, during the fall of 2018, the differential reached a record high of over US$50 per barrel due to insufficient pipeline capacity.
- In Q2 2020, oil prices collapsed due to the drop in demand resulting from government-imposed lockdowns to limit the spread of Covid-19. US refineries drastically reduced their refinery runs and purchases of Canadian heavy crude.
- Beginning in Q3 2020, demand recovered as lockdown measures were eased. This resulted in a big price rebound for major crude benchmarks in the later half of 2020 and into 2021.
BY RAIL

In 2018, as production increases in Western Canada began to outpace pipeline capacity, shipments of crude oil by rail increased to fill the gap, more than doubling from their 2017 levels.

Amidst the economic disruption beginning in Q1 2020, crude shipments surged beyond their 2019 peak, reaching a high of 412 Mb/d in February 2020. This upswing was promptly reversed in Q2, when shipments fell sharply. After bottoming-out at a four year low in July 2020, volumes have started to recover.

Domestic rail shipments of fuel oils and crude petroleum are relatively stable as compared to volumes of crude oil exports by rail.
Oil sands producers recycle about

- **OIL SANDS: ENVIRONMENTAL CONSIDERATIONS**
- **WATER**
  - **Mining method:**
    - **2.2 barrels**
    - ![Diagram showing the water requirement per barrel of bitumen for mining method]
  - **In situ method:** an average of
    - **0.2 barrels**
    - ![Diagram showing the water requirement per barrel of bitumen for in situ method]
  - **Oil sands producers recycle about**
    - **78%** of the water used for established mines
    - **87%** of the water used for in situ production
GREENHOUSE GASES

11% of Canada’s total GHG emissions and 0.15% of global emissions

From 2000 to 2019, the emission intensity of oil sands operations dropped by about 33% as a result of technological and efficiency improvements, fewer venting emissions and reductions in the percentage of crude bitumen being upgraded to synthetic crude oil.

LAND

- area of oil sand resources 142,200 km²
- total mineable area 4,800 km²
- total area being mined 953 km²
- tailings ponds 257 km²

For comparison:
- Canada’s area 10,000,000 km²
- Canada’s boreal forest 2,700,000 km²

---

* Proved reserves are known to exist and are recoverable under current technological and economic conditions.

**Canadian marketable resources: natural gas that is in a marketable condition, after the removal of impurities and after accounting for any volumes used to fuel surface facilities. Marketable resources are recoverable using existing technologies, based on geological information, but much of the drilling necessary to produce the natural gas has not yet been performed.

**U.S. technically recoverable resources: gas estimated to be recoverable as drilling and infrastructure expands (similar to Canadian marketable resources).
CANADA-U.S. MARKET (2020)

Canada’s natural gas market is heavily integrated with that of the U.S. largely because of the location of supply basins, demand centres, and the availability of transportation infrastructure, as well as existing Canada-U.S. trade agreements. These factors allow for consumers and distributors on either side of the border to freely access natural gas from the lowest cost supplier.

Canadian average marketable production
16.1 Bcf/d (0.46 Bcm/d)
16% conventional
84% unconventional*

U.S. average marketable production
91.4 Bcf/d (2.59 Bcm/d)
11% conventional
89% unconventional*

* Unconventional gas includes tight gas, coal bed methane and shale gas.

Canada-U.S. production
107.5 Bcf/d (3.04 Bcm/d)

LNG imports of North American countries
0.08 Bcf/d Canada
0.25 Bcf/d Mexico
0.13 Bcf/d U.S.

LNG exports of North American countries
6.53 Bcf/d U.S.
While Canadian natural gas production remained relatively flat and the number of wells drilled declined, the well productivity has increased over time. This reflects the increased use of horizontal drilling and increased well length.
**MARKETABLE PRODUCTION BY PROVINCE, 2020**

- **TOTAL 16.1 Bcf/d (0.46 Bcm/d)**
• Natural gas imports from the U.S. into Eastern Canada are on the rise because of higher supplies in the U.S. Northeast and shorter transportation distances from these U.S. natural gas basins.

• Canadian natural gas exports to the western U.S. and U.S. Midwest remain significant.

• Since 2009, Canada has also imported small amounts of liquefied natural gas from other countries through the Canaport LNG terminal in Saint John, N.B.

42% of Canadian production is exported.

Canadian exports are largely destined for the U.S.

98% of U.S. imports and 8% of U.S. consumption comes from Canada.

The value of Canadian net exports (exports minus imports) was $4.7 billion in 2020.

96% of Canada’s imports and 20% of Canadian consumption comes from the U.S.
UPSTREAM PRICES

The AECO hub is Canada’s largest natural gas trading hub, and the AECO price serves as a benchmark for Alberta wholesale natural gas transactions.

SPOTLIGHT: OIL AND GAS

GHG emissions from oil and gas production have gone up 25% between 2000 and 2019, largely from increased oil sands production, particularly in situ extraction.

During this period, oil sands production emissions more than tripled while conventional oil and natural gas emissions decreased by 14%.

Due to technological and operational efficiency improvements, oil sands emissions per barrel have decreased 33% from 2000 to 2019.
HYDROCARBON GAS LIQUIDS (HGLs)
SUPPLY AND DEMAND* (2020)

Canadian production

**Exports**
- Propane: 706.6 Mb/d

NATURAL GAS LIQUIDS ENERGY USE BY PROVINCE, 2018

TOTAL 145 PJ
REFINED PETROLEUM PRODUCTS (RPPs)

PETROLEUM REFINERIES

Petroleum refineries transform crude oil into a wide range of refined petroleum products (RPPs, e.g. gasoline, diesel). Other facilities such as asphalt plants, lubricant plants, upgraders and some petrochemical plants also process crude oil to produce a limited range of products.

REFINERY ACTIVITIES

- **crude oil distillation**: separating products from crude oil by heating
- **additional processing**: e.g. catalytic cracking, reforming, coking
- **product blending**: end-use RPPs are usually blended with additives or renewable fuels

REFINERY OUTPUTS

- transportation fuels: gasoline, diesel, aviation fuels, heavy fuel oil
- heating oil
- liquid petroleum gases: propane and butane from refineries
- petrochemical feedstock
- other products: e.g. kerosene, lubricating oils, greases, waxes, asphalt
**SUPPLY AND DEMAND** (2020)

Canadian net production: 1.8 MMb/d (107 billion L)

Exports: 0.3 MMb/d (16 billion L)

Imports: 0.1 MMb/d (9 billion L)

**DOMESTIC CONSUMPTION BY PRODUCT**

- **MOTOR GASOLINE**: 41%
- **DISTILLATE FUELS**: 34%
- **STILL GAS**: 7%
- **PETROLEUM COKE**: 4%
- **RESIDUAL FUEL OIL**: 4%
- **KEROSENE-TYPE JET FUEL**: 4%
- **ASPHALT**: 3%
- **OTHER PRODUCTS**: 2%

* Certain product shares are based on Natural Resources Canada estimates.
Primarily motor gasoline, diesel, jet fuel, fuel oil, and kerosene

92% of Canadian refined petroleum product exports are to the United States.

15% of Canadian production of refined petroleum products is exported.

27% of United States imports come from Canada.

9% of Canadian refined petroleum products is imported:

- 73% United States
- 8% Netherlands
- 2% Belgium
- 2% United Kingdom
RETAIL PRICES

AVERAGE CANADIAN REGULAR GASOLINE PRICES, 2020

- **Cents per litre (cpl)**
- **Taxes**
- **Marketing Margin**
- **Refining Margin**
- **Crude Costs**

Cities included:
- Canada
- Vancouver
- Calgary
- Toronto
- Montreal
- Halifax
# REFINERY CAPACITY

PRODUCTION AND USE

Canada produced

57% is METALLURGICAL COAL used for steel manufacturing

46 Mt of coal in 2020, of which

43% is THERMAL COAL used for electricity

Electricity generation consumed

17 Mt of coal in 2020, a decrease from 43.7 Mt in 2010.

60% is THERMAL COAL

COAL PRODUCTION BY PROVINCE, 2020

B.C. 53%

ALTA. 31%

TOTAL 46 Mt

COAL-FIRED GENERATING CAPACITY BY PROVINCE, 2020

ALTA. 58%

SASK. 21%

N.B. 7%

N.S. 15%

TOTAL 7,425 MW
DOMESTIC DEMAND

Mostly for electricity generation in Alberta and Saskatchewan

Also for metallurgical applications

TRADE

CANADIAN TRADE OF COAL

Canada’s exports are primarily metallurgical coal (88% in 2020).
TRADE (2020)

EXPORTS

32 Mt

major export destinations (by % value)

$4.6 billion

IMPORTS

6 Mt

69% of Canadian imports are from the U.S.

27% Japan
23% South Korea
14% China

2% of Canadian exports are to the U.S., representing 7% of U.S. coal imports.

</tr>
</tbody>
</table>

**Notes**
- Tonne may be abbreviated to “t” and is not to be confused with “T” for tera or trillion.
- Roman numerals are sometimes used with imperial units (this can create confusion with the metric “M”).
CRUDE OIL

Upstream
• reserves usually in barrels or multiples (million barrels)
• production/capacity often in barrels per day or multiples (thousand barrels/day or Mb/d, million barrels/day or MMb/d)
• metric: 1 cubic metre = 6.2898 barrels
• International Energy Agency: uses weight (tonnes) rather than volume

Downstream (petroleum products)
• volumes of refined products usually in litres
• 1,000 litres = 1 cubic metre
• U.S.: 1 U.S. gallon = 3.785 litres

NATURAL GAS

Volume
• reserves/production usually in cubic feet or multiples (billion cubic feet or Bcf, trillion cubic feet or Tcf)
• production/capacity often in cubic feet per day or multiples (Bcf/d, Tcf/d)
• metric: 1 cubic metre = 35.3147 cubic feet

Density
• 1 million t LNG = 48.0279 billion cubic feet

Pricing
Volume-based:
• cents per cubic metre (¢/m³) (customer level in Canada)
• $ per hundred cubic feet ($/CCF) (customer level in the U.S.)

Energy content-based:
• $ per gigajoule ($/GJ) (company level in Canada)
• $ per million British thermal units ($/MMbtu) (company level in the U.S., LNG)

URANIUM
• 1 metric tonne = 1,000 kilograms of uranium metal (U)
• U.S.: in pounds of uranium oxide (U₃O₈)
• 1 lb. U₃O₈ = 0.84802 lb. U = 0.38465 kg U

COAL
• 1 metric tonne = 1,000 kilograms
• U.S.: 1 short ton = 2,000 pounds
• 1 metric tonne = 1.10231 short tons

ELECTRICITY

Capacity
• maximum rated output that can be supplied at an instant, commonly expressed in megawatts (MW)

Total capacity
• installed generator nameplate capacity

Generation/sales
• flow of electricity over time, expressed in watt-hours or multiples:
  • kilowatt-hours or kWh (e.g. customer level)
  • megawatt-hours or MWh (e.g. plant level)
  • gigawatt-hours or GWh (e.g. utility level)
  • terawatt-hours or TWh (e.g. country level)

From capacity to generation
• A 1-MW unit operating at full capacity over one hour generates 1 MWh of electricity.
• Over one year, this unit could generate up to 8,760 MWh (1 MW × 24 hr × 365 days).
• Units are rarely used at full capacity over time because of factors such as maintenance requirements, resource limitations and low demand.
• “Capacity factor” is the ratio of actual generation to full capacity potential.

ENERGY CONTENT

Rather than using “natural” units (e.g. volume, weight), energy sources can be measured according to their energy content – this allows comparison between energy sources.

• metric: joules or multiples (gigajoules or GJ, terajoules or TJ, petajoules or PJ)
• U.S.: 1 British thermal unit (BTU) = 1,055.06 joules
• IEA: energy balances expressed in oil equivalent:
  • thousand tonnes of oil equivalent (ktoe)
  • million tonnes of oil equivalent (Mtoe)

Typical values
• 1 m³ of crude oil = 39.0 GJ
• 1,000 m³ of natural gas = 38.3 GJ
• 1 MWh of electricity = 3.6 GJ
• 1 metric tonne of coal = 29.3 GJ
• 1 metric tonne of wood waste = 18.0 GJ
• 1 metric tonne of uranium = 420,000 GJ to 672,000 GJ

SECTION 1: KEY ENERGY, ECONOMIC AND ENVIRONMENTAL INDICATORS

• ENERGY PRODUCTION AND SUPPLY
  • Global Primary Energy Production: IEA Annual Database
  • Global Energy Rankings: IEA Annual Database
  • Primary Energy Production by Region & Source: Statistics Canada tables 25-10-0020-01, 25-10-0029-01 and 25-10-0007-01 and NRCan estimates
  • Total primary energy supply: IEA Annual Database, World Energy Balances and IEA Standing Group on Long-Term Co-operation questionnaire
  • Primary and secondary energy use: Natural Resources Canada’s National Energy Use Database

• ECONOMIC CONTRIBUTION
  • GDP: Statistics Canada tables 38-10-0285-01, 36-10-0221-01, 36-10-0103-01 and 36-10-0400-01 and NRCan estimates
  • Employment: Statistics Canada tables 38-10-0285-01, 36-10-0214-01, 36-10-0489-01, 36-10-0480-01, 36-10-0221-01, 36-10-0400-01, 14-10-0023-01, Provincial NRSA Special tabulation and NRCan estimates
  • Energy Trade: Statistics Canada International Merchandise Trade Database, IEA Annual Database and United States EIA (U.S. Imports by Country of Origin)
  • Canada-U.S. Energy Trade: Statistics Canada International Merchandise Trade Database and United States EIA (U.S. Imports by Country of Origin)
  • Government Revenues: Statistics Canada Table 33-10-0006-01, Statistics Canada special tabulation (royalties) and Canadian Association of Petroleum Producers, Statistical Handbook, Table 01-01C (Crown land sales Western Canada and Canada lands)

• ENERGY AND GHG EMISSIONS
  • GHG Emissions by Sector: Environment and Climate Change Canada (National Inventory Report)

SECTION 2: INVESTMENT

• Capital expenditures: Statistics Canada tables 34-10-0035-01, 34-10-0036-01, and 34-10-0040-01
• Canada’s Energy Infrastructure: StatCan Table: 36-10-0608-01: Infrastructure Economic Accounts, investment and net stock by asset, industry, and asset function
• Canada’s Major Energy Projects: NRCan Major Project Inventory
• Foreign Direct Investment and Canadian Direct Investment Abroad: Statistics Canada Table 36-10-0009-01
• Foreign Control of Canadian Assets: Statistics Canada tables 33-10-0033-01, 33-10-0005-01 and 33-10-0006-01
• Canadian Energy Assets: Compiled by NRCan from S&P Global Market Intelligence and annual financial statements from publicly traded Canadian energy companies.
• Research, Development and Demonstration
• Environmental Protection Expenditures: StatCan Environmental protection expenditures by businesses, 2018 (Tables 38-10-0130-01, 38-10-0132-01)
SECTION 3: SKILLS, DIVERSITY AND COMMUNITY

- Energy Sector Demographics: Statistics Canada Natural Resources Account, special release tables.
- Household Expenditures on Energy: Statistics Canada Table 11-10-0222-01
- Energy Retail Prices: Statistics Canada tables 18-10-0004-01 and 18-10-0001-01
- Energy Reliant Communities: NRCAn analysis based on Statistics Canada 2016 Census Data

SECTION 4: ENERGY EFFICIENCY

- ENERGY USE
  - Primary and secondary energy use: Natural Resources Canada’s National Energy Use Database
  - Energy efficiency: Natural Resources Canada’s National Energy Use Database and Natural Resources Canada Energy Efficiency Trends in Canada 2000-2018
  - Energy intensity: Natural Resources Canada’s National Energy Use Database
  - Energy in our daily lives: Natural Resources Canada’s Energy Efficiency Trends in Canada 2000-2018
  - Residential Energy Use, water heating and space heating: Natural Resources Canada’s National Energy Use Database and NRCan estimates
  - Residential, commercial, institutional and industrial sectors: Natural Resources Canada’s National Energy Use Database

- ENERGY TRENDS
  - Trends in Energy use and intensity: Natural Resources Canada’s National Energy Use Database

SECTION 5. CLEAN POWER AND LOW CARBON FUELS

- CLEAN TECHNOLOGY AND THE ECONOMY
  - Environmental and clean technology: compiled by NRCAn from Statistics Canada data and other public sources (Toronto Stock Exchange)

- ELECTRICITY
  - World production and exports: IEA database (Electricity Information [note: IEA production/generation data is expressed on a “gross” basis, i.e. before generating station use])
  - Trade: NEB Table (Electricity Exports and Imports Statistics), and Statistics Canada.
  - Canadian and provincial supply: compiled by Statistics Canada and NRCAn’s Electricity Division from various sources
  - Prices: Hydro-Québec (Comparison of Electricity Prices in Major North American Cities)
  - Electricity energy use: Office of Energy Efficiency Comprehensive Energy Use Database.
  - Levelized cost of electricity: NEB (Canada’s Adoption of Renewable Power Sources – Energy Market Analysis)

- RENEWABLES
  - International context – Production: IEA (Renewables Information)
  - International context – share of energy supply: IEA (Electricity Information, Energy Balances of OECD Countries, and Energy Balances of Non-OECD Countries) and United States EIA
  - Domestic production: IEA (Renewables Information) and NRCAn data based on Statistics Canada
  - Hydro – international generation: IEA (Electricity Information, Energy Balances of OECD Countries, and Energy Balances of Non-OECD Countries)
• **Hydro – capacity in Canada:** Statistics Canada Table 25-10-0022-01 and compiled by NRCan
• **Hydro – facilities and projects:** compiled by NRCan from Statistics Canada and other public sources
