## Introduction

The 2024 Fuel Consumption Guide gives information about the fuel consumption of 2024 model year light-duty vehicles. You can use this information to compare vehicles as you shop for the most fuel-efficient vehicle that meets your everyday needs.

Remember as you shop that fuel is an expense you will be paying for a long time. If you buy a fuel-efficient vehicle, drive it in fuel-efficient ways and follow the manufacturer's maintenance recommendations, you'll save money for years to come – even more if fuel prices rise.

### Your vehicle choice affects the environment

The more fuel your vehicle burns, the more greenhouse gases it produces, mostly in the form of carbon dioxide, or CO<sub>2</sub>. For every litre of gasoline your vehicle uses, it generates about 2.3 kilograms (kg) of CO<sub>2</sub>. Although not directly harmful to our health, CO<sub>2</sub> emissions contribute to climate change.

### Fuel consumption testing

It would be difficult to drive every model of new vehicle on the road to measure fuel consumption. And it would be impossible to get repeatable results that way because so many factors – road conditions and weather, to name just two – can affect a vehicle's performance.

That's why vehicle manufacturers use standard, controlled laboratory testing and analytical procedures to generate the fuel consumption data that appear in this guide, in the [fuel consumption ratings search tool](#) and on the EnerGuide label for vehicles.

Environment and Climate Change Canada collects the data from vehicle manufacturers. Natural Resources Canada (NRCan) puts the data and other information together to publish the Fuel Consumption Guide.

### Improved testing

Before model year 2015, manufacturers used the 2-cycle testing procedure, which tested vehicles under simulated city and highway conditions to find out how much fuel they use.

Manufacturers now use the **5-cycle testing** procedure. The improved procedure tests for city and highway conditions as well as operating a vehicle in cold weather, the use of air conditioners, and driving at higher speeds with more rapid acceleration and braking.

5-cycle testing produces fuel consumption ratings that are more representative of a vehicle's on-road fuel consumption.

### How 5-cycle testing works

A vehicle is driven about 6,000 km before testing. Then the test vehicle is placed on a machine called a chassis dynamometer, which is like a treadmill for vehicles. The dynamometer is adjusted for things like the weight and aerodynamics of the specific vehicle. A driver runs the vehicle through standard driving cycles that simulate trips in the city and on the highway.

City and highway fuel consumption ratings come from the emissions generated during the five laboratory driving cycles.

For [detailed test information](#), visit [vehicles.gc.ca](https://www.vehicles.gc.ca).

### Not all vehicles are tested

Vehicle manufacturers are not required to submit fuel consumption data for:

- sport utility vehicles (SUVs) and passenger vans with a gross vehicle weight rating (GVWR) of 4,536 kg (10,000 lbs.) or more – GVWR is the weight of the vehicle plus maximum carrying capacity (passengers and cargo)
- pickup trucks with a GVWR of more than 3,856 kg (8,500 lbs.) and an interior bed length of 183 cm (72 in.) or more

- cargo vans with a GVWR of more than 3,856 kg (8,500 lbs.)

Vehicles that exceed these limits are not tested, so their fuel consumption ratings do not appear in this guide, the [fuel consumption ratings search tool](#) or on the EnerGuide label.

## Understanding fuel consumption ratings

Fuel consumption ratings give consumers reliable information about the relative fuel efficiency of vehicles. You can use this information to compare the fuel consumption of different models and then choose the most fuel-efficient vehicle that meets your everyday needs.

Use this guide or the [fuel consumption ratings search tool](#) to compare the fuel consumption information of different models. The vehicle with the best fuel consumption ratings and lowest estimated annual fuel cost can save you fuel and money for years.

Remember, the lower the litres per 100 kilometres (L/100 km) rating, the better the fuel consumption. And the higher the miles per gallon (mpg) rating, the better the fuel use.

### Your fuel consumption will vary

Fuel consumption ratings show the fuel consumption that may be achieved if you drive in fuel-efficient ways and properly maintain your vehicle. The ratings help you compare the fuel consumption of different vehicles. However, it is impossible for a laboratory test to simulate all conditions that drivers may experience.

Your vehicle's fuel consumption will vary from its published fuel consumption ratings, depending on how, where and when you drive.

The following factors will affect the fuel consumption of your vehicle:

- How you accelerate
- How fast you drive
- The age and condition of your vehicle
- Temperature and weather
- Traffic and road conditions
- Using air conditioning and other powered accessories
- Using all-wheel and four-wheel drive

Also, there may be fuel consumption differences in the

same make and model because of small variations in vehicle manufacturing. And some vehicles do not get their best fuel consumption until they have been driven for about 6,000 to 10,000 km.

To watch our [video about factors that affect fuel consumption](#), visit [vehicles.gc.ca](#).

**Published ratings are a useful tool** for comparing vehicles before you buy. But keep in mind that they're based on standard tests and **may not accurately predict the fuel consumption you will get on the road.**

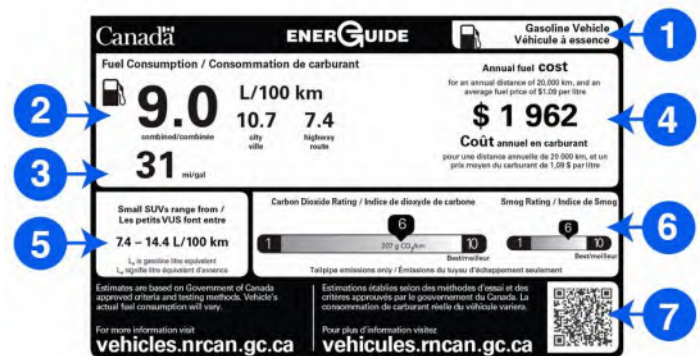

## EnerGuide label for vehicles

The EnerGuide label gives model-specific fuel consumption information for new light-duty vehicles available for sale in Canada. This includes passenger cars, vans, pickup trucks and SUVs.

Using EnerGuide labels, you can make comparisons between vehicles and find the most fuel-efficient one that meets your everyday needs.

EnerGuide labels should remain on new vehicles until they are sold. If a new vehicle has no label, ask the dealer to give you the manufacturer's fuel consumption information for the vehicle.

Here is a sample label for a gasoline vehicle – slightly different labels appear on vehicles that use other types of fuel.

1. **Vehicle technology and fuel** – The text and related icon identify the type of fuel used by the vehicle.
2. **Fuel consumption** – This is a prominent combined fuel consumption rating and separate city and highway fuel consumption ratings in L/100 km. The combined rating reflects 55% city and 45% highway driving.
3. **Fuel economy** – Here, the combined rating is expressed in miles per imperial gallon (mi/gal).

4. **Annual fuel cost** – This is an estimate based on the combined fuel consumption rating, 20,000 km driven and the fuel price indicated.
5. **Vehicle class range** – This shows the best and worst combined fuel consumption ratings of vehicles in the same class.
6. **CO<sub>2</sub> and smog ratings** – Here are the vehicle's tailpipe emissions of CO<sub>2</sub> and smog-forming pollutants rated on a scale from 1 (worst) to 10 (best). The CO<sub>2</sub> emissions, in grams per kilometre driven, are shown on the CO<sub>2</sub> bar.
7. **QR code** - The quick-response code links smartphone users to the [fuel consumption ratings search tool](#).

## Choosing the right vehicle

There are many things to consider when you buy a new vehicle: price, comfort, styling, environmental factors and more. Choosing the most fuel-efficient vehicle that meets your everyday needs can save you money and help the environment.

It's worth putting some time into your choice. Fuel consumption can range from less than 2.0 gasoline litres equivalent per 100 km (L<sub>e</sub>/100 km) for a battery-electric vehicle to more than 20.0 L/100 km for a large SUV.

So driving 20,000 km a year can cost from less than \$500 to more than \$4,000. Meanwhile, CO<sub>2</sub> emissions can range from 0 to more than 9 tonnes, depending on the vehicle you buy.

### Consider your powertrain

A vehicle's powertrain is made up of the components – such as the engine, transmission, drive shaft, suspension and the wheels – that make a vehicle go. Today, you can choose from a wide range of powertrains.

**Hybrid-electric vehicles**, or hybrids, use both a conventional internal combustion engine and an electric motor, which is more energy efficient than a conventional powertrain, especially in city driving. Hybrids have battery packs that are charged with electricity generated by the vehicle. They can't be plugged in to recharge. When hybrids are operating in electric-only mode, they emit no CO<sub>2</sub> or other emissions. The typical hybrid offers fuel savings and CO<sub>2</sub> reductions of 20 to 40% over gasoline-only vehicles.

To watch our [video about hybrid-electric vehicles](#), visit [vehicles.gc.ca](#).

**Electric vehicles** reduce greenhouse gas emissions and can significantly reduce your fuel costs. There are two types of electric vehicles on the market – plug-in hybrid electric and battery-electric – and each has its benefits.

- **Plug-in hybrid electric vehicles (PHEV)** are hybrids that have high-capacity batteries that can be recharged by plugging them in. When operating in electric-only mode, PHEVs produce no tailpipe emissions.

To watch our [video about plug-in hybrid electric vehicles](#), visit [vehicles.gc.ca](#).

- **Battery-electric vehicles (BEV)** use electric motors that draw electricity from on-board rechargeable batteries. They are the most fuel-efficient vehicles available, with an average combined consumption rating of 2.3 L<sub>e</sub>/100 km. BEVs produce no tailpipe emissions.

To watch our [video about battery-electric vehicles](#), visit [vehicles.gc.ca](#).

Electric-drive motors are much more efficient than combustion engines and drivetrains. The efficiency of energy conversion from on-board storage to turning the wheels is nearly five times greater for electricity than gasoline, at approximately 76% and 16%, respectively.

Electric vehicles also increase a vehicle's efficiency by using regenerative braking technology to recover energy that would otherwise have been lost.

PHEVs and BEVs can be recharged from a charging station that uses standard 240-volt electrical power (the kind used for stoves and clothes dryers in most homes). Most can be recharged from a 110-volt service, although charging time will be significantly longer.

### Technology and other vehicle variables

Canada's greenhouse gas emission standards are becoming more stringent, and vehicle manufacturers have responded with a wide range of engineering advancements. These features can save you money and reduce your impact on the environment.

A **cylinder deactivation system (CDS)** in a 6- or 8-cylinder engine shuts down half of the cylinders when only a small amount of the engine's power is needed. A CDS can lower fuel consumption by 4 to 10%.

**Turbochargers** force air into an engine's cylinders – unlike a standard engine, which draws air in at atmospheric pressure. This means that a smaller, turbocharged engine can produce the same power as a

larger standard engine – and can lower fuel consumption by 2 to 6%.

**Variable valve timing (VVT)** and lift systems adjust the timing of the engine valves to improve efficiency over a wide range of engine operating speeds. That leads to better operation of the engine and a 1 to 6% reduction in fuel consumption.

**Idle stop-start systems** lower fuel consumption and exhaust emissions by turning off the engine when the vehicle is idling and during deceleration at low speeds. Idle stop-start technology can lower your fuel consumption during city driving by 4 to 10% or more.

**Direct fuel injection** increases your engine’s combustion efficiency because of a higher level of precision over the amount of fuel injected into the cylinder, the timing of the injection and the spray pattern. Direct injection can lower fuel consumption by 1 to 3%.

If you shop smart, you can save fuel – and money – for years to come. Find more information about [factors that affect fuel efficiency](#) and [tips for buying a fuel-efficient vehicle](#) at [vehicles.gc.ca](#).

## Fuel-efficient driving

---

Fuel-efficient driving can save you hundreds of dollars in fuel each year, improve road safety and prevent wear on your vehicle.

Adopt these 5 fuel-efficient driving techniques to lower your vehicle’s fuel consumption and CO<sub>2</sub> emissions by as much as 25%:

### 1. Accelerate gently

The harder you accelerate the more fuel you use. In the city, you can use less fuel by easing onto the accelerator pedal gently. To be as fuel-efficient as possible, take 5 seconds to accelerate your vehicle up to 20 kilometres per hour from a stop.

### 2. Maintain a steady speed

When your speed dips and bursts, you use more fuel, and spend more money, than you need to. Tests have shown that varying your speed up and down between 75 and 85 km per hour every 18 seconds can increase your fuel use by 20%.

### 3. Anticipate traffic

Look ahead while you’re driving to see what is coming up. And keep a comfortable distance between your vehicle and the one in front of you. By looking closely at

what pedestrians and other cars are doing, and imagining what they’ll do next, you can keep your speed as steady as possible and use less fuel. It’s also safer to drive this way.

### 4. Avoid high speeds

Keep to the speed limit and save on fuel! Most cars, vans, pickup trucks and SUVs are most fuel-efficient when they’re travelling between 50 and 80 km per hour. Above this speed zone, vehicles use increasingly more fuel the faster they go.

### 5. Coast to decelerate

Every time you use your brakes, you waste your forward momentum. By looking ahead at how traffic is behaving, you can often see well in advance when it’s time to slow down. You will conserve fuel and save money by taking your foot off the accelerator and coasting to slow down instead of using your brakes.

See [more ways to use less fuel](#) at [vehicles.gc.ca](#).

## Most fuel-efficient vehicles

---

NRCan recognizes the most fuel-efficient new light-duty vehicles sold in Canada. Best-in-class vehicles have the lowest combined fuel consumption rating, based on 55% city and 45% highway driving.

For each class, the most fuel-efficient conventional vehicle and the most efficient electric vehicle (where applicable) are recognized.

To see the [most fuel-efficient vehicles for model year 2024](#), visit [vehicles.gc.ca](#).

## Fuel consumption ratings search tool

---

Use the [fuel consumption ratings search tool](#) at [vehicles.gc.ca](#) to compare the fuel consumption information of new and older models to find the most fuel-efficient vehicle that meets your everyday needs.

## Understanding the tables

### Model

**AWD** = All-wheel drive – vehicle designed to operate with all wheels powered

**4WD/4X4** = Four-wheel drive – vehicle designed to operate with either two wheels or four wheels powered

**FFV** = Flexible-fuel vehicle – vehicle designed to operate on gasoline and ethanol blends of up to 85% ethanol (E85)

**SWB** = Short wheelbase; **LWB** = Long wheelbase; **EWB** = Extended wheelbase

### Class

Cars	
Vehicle class	Interior volume
Two-seater (T)	n/a
Minicompact (I)	less than 2,405 L (85 cu. ft.)
Subcompact (S)	2,405–2,830 L (85–99 cu. ft.)
Compact (C)	2,830–3,115 L (100–109 cu. ft.)
Mid-size (M)	3,115–3,400 L (110–119 cu. ft.)
Full-size (L)	3,400 L (120 cu. ft.) or more
Station wagon	
Small (WS)	less than 3,680 L (130 cu. ft.)
Mid-size (WM)	3,680–4,530 L (130–159 cu. ft.)

Light trucks	
Vehicle class	Gross vehicle weight rating
Pickup truck	
Small (PS)	less than 2,722 kg (6,000 lb.)
Standard (PL)	2,722–3,856 kg (6,000–8,500 lb.)
Sport utility vehicle	
Small (US)	less than 2,722 kg (6,000 lb.)
Standard (UL)	2,722–4,536 kg (6,000–9,999 lb.)
Minivan (V)	less than 3,856 kg (8,500 lb.)
Van	
Cargo (VC)	less than 3,856 kg (8,500 lb.)
Passenger (VP)	less than 4,536 kg (10,000 lb.)
Special purpose vehicle (SP)	less than 3,856 kg (8,500 lb.)

### Engine size/Motor/Cylinders

Total displacement of all cylinders (in litres [L]); electric motor peak power output (in kilowatts [kW]); number of engine cylinders

### Transmission

**A** = automatic; **AM** = automated manual; **AS** = automatic with select shift; **AV** = continuously variable; **M** = manual; number of gears/speeds (1–10)

### Fuel type

**X** = regular gasoline; **Z** = premium gasoline; **D** = diesel; **E** = E85; **B** = electricity; **N** = natural gas

### Fuel consumption

Fuel consumption ratings are shown in litres per 100 kilometres (L/100 km). To compare fuel economy ratings expressed in miles per imperial gallon (mpg) or in miles per U.S. gallon (mpg U.S.), use our [fuel consumption ratings search tool](#).

**City rating** – represents urban driving in stop-and-go traffic

**Highway rating** – represents a mix of open highway and rural road driving, typical of longer trips

**Combined rating** – reflects 55% city driving and 45% highway driving

The combined rating is calculated using city and highway values that are later rounded for publication. Consequently, vehicles with identical published city and highway ratings may not have identical combined ratings because of the rounding process.

For FFVs, consumption values are provided for both gasoline and E85. For plug-in hybrid electric vehicles (PHEVs), values are provided for electric-only or blended electric and gasoline mode, and for gasoline-only operation.

To help you compare vehicles that use electricity, a conversion factor is used to convert electrical energy consumption values, expressed in kilowatt hours per 100 kilometres (kWh/100 km), into gasoline litres equivalent per 100 kilometres (L<sub>e</sub>/100 km). One litre of gasoline contains the energy equivalent to 8.9 kWh of electricity.

### Annual fuel cost

Estimated annual fuel cost is based on the combined rating, a driving distance of 20,000 km and forecast prices of \$1.45/L for regular gasoline, \$1.70/L for premium gasoline, \$1.70/L for diesel fuel and \$0.16/kWh for electricity. Pricing for E85 is not provided.

For PHEVs, annual fuel cost values reflect a mix of electric mode and gasoline-only operation.

### CO<sub>2</sub> emissions

The vehicle's tailpipe emissions of carbon dioxide are shown in grams per kilometre (g/km) for combined city and highway driving. For PHEVs, CO<sub>2</sub> emissions values reflect a mix of electric mode and gasoline-only operation.

### CO<sub>2</sub> rating

The vehicle’s tailpipe emissions of carbon dioxide are rated on a scale from 1 (worst) to 10 (best).

### Smog rating

The vehicle’s tailpipe emissions of smog-forming pollutants are rated on a scale from 1 (worst) to 10 (best).

### Range

For PHEVs and battery-electric vehicles (BEVs), range is the estimated driving distance (in kilometres) on a fully charged battery or full tank of fuel.

### Recharge time

For PHEVs and BEVs, recharge time is the estimated time (in hours) to fully recharge the battery at 240 volts.

#### Converting to miles per gallon

To convert between L/100 km and mpg, use the following formulas:

$$\text{mpg} = 282.48 \div \text{L}/100 \text{ km} \qquad \text{L}/100 \text{ km} = 282.48 \div \text{mpg}$$

$$4.546 \text{ L} = 1 \text{ imperial gallon} = 1.2 \text{ U.S. gallons}$$

To convert between L/100 km and mpg (U.S.), use the following formulas:

$$\text{mpg (U.S.)} = 235.21 \div \text{L}/100 \text{ km} \qquad \text{L}/100 \text{ km} = 235.21 \div \text{mpg (U.S.)}$$

$$3.785 \text{ L} = 1 \text{ U.S. gallon}$$

<b>L/100 km</b>	2.0	3.0	4.0	5.0	6.0	7.0	8.0	9.0	10.0	11.0	12.0
<b>mpg</b>	141	94	71	56	47	40	35	31	28	26	24
<b>mpg (U.S.)</b>	118	78	59	47	39	34	29	26	24	21	20

**Note:** Many vehicles now have an onboard trip computer that can display on-road fuel use. In addition to fuel consumption values displayed in L/100 km, fuel economy values are usually displayed in **mpg (U.S.)**.

## Plug-in hybrid electric vehicles

Plug-in hybrid electric vehicles (PHEVs) are hybrids with high-capacity batteries that can be recharged by plugging them in. PHEVs do not have to be plugged in, but will be more fuel-efficient and have a longer driving range if they are. When operating in electric-only mode, PHEVs produce no tailpipe emissions.

### Two types of PHEVs

In **series PHEVs**, an internal combustion engine generates electricity only. An electric motor drives the vehicle. Series PHEVs can run in electric-only mode until the battery needs to be recharged. The engine will then generate the electricity needed to power the electric motor.

In **blended PHEVs**, an internal combustion engine and an electric motor are connected to the wheels, and both may drive the vehicle. The PHEV may operate using electricity only, using both electricity and gasoline at the same time, or using gasoline only.

\*In testing, this vehicle did not use any gasoline during electric mode operation. However, depending on how you drive the vehicle, you may use gasoline during electric mode operation following a full charge.

## Battery-electric vehicles

Battery-electric vehicles (BEVs) are powered by motors that draw electricity from on-board storage batteries. You plug in your BEV to recharge it.

BEVs don't produce emissions from the tailpipe. This means they can reduce greenhouse gas (GHG) emissions and other pollutants that form smog. If the source of the vehicle's electricity is clean (such as solar or hydro-electric power) the vehicle will have no overall GHG emissions.
